this monograph solely investigates the debye screening length dsl in semiconductors and their nano structures the materials considered are quantized structures of non linear optical iii v ii vi ge te platinum antimonide stressed materials bismuth gap gallium antimonide ii v and bismuth telluride respectively the dsl in opto electronic materials and their quantum confined counterparts is studied in the presence of strong light waves and intense electric fields on the basis of newly formulated electron dispersion laws that control

the studies of such quantum effect devices the suggestions for the experimental determination of 2d and 3d dsl and the importance of measurement of band gap in optoelectronic materials under intense built in electric field in nano devices and strong external photo excitation for measuring photon induced physical properties have also been discussed in this context the influence of crossed electric and quantizing magnetic fields on the dsl and the dsl in heavily doped semiconductors and their nanostructures has been investigated this monograph contains 150 open research problems which form the integral part of the text and are useful for both phd students and researchers in the fields of solid state sciences materials science nano science and technology and allied fields in addition to the graduate courses in modern semiconductor nanostructures

this unique book is the key to computer contouring exploring in detail the practice and principles using a personal computer contouring allows a three dimensional view in two dimensions and is a fundamental technique to represent spatial data all aspects of this type of representation are covered including data preparation selecting contour intervals interpolation and gridding computing volumes and output and display formulated for both the novice and the experienced user this book initially conducts the reader through a step by step explanation of pc software and its application to personal data and then presents the rationale and concepts for contouring using the computer accompanying the book is a set of basic programs in ascii format on an ms dos 360kb floppy disk these programs implement eighteen interpolation methods five gradient estimation techniques and seven types of display and are designed to be adapted or combined to suit a wide range of possible objectives concerning either the comparative study of contouring methodology or the practical production of contour displays

the objective of this tutorial is to introduce the reader to the methodologies and the knowledge representation techniques currently used in automatic text error correction and text interpretation aimed at computer researchers interested in developing flexible techniques for text processing and computer vision the selected papers cover a wide context of literature and a wider span of time
